

AbPrazole Plus or **AbPrazole** + **AbSucralfate**
 (Omeprazole Plus) (Omeprazole) (Sucralfate)

 DESCRIPTION

Omeprazole is from the family of proton pump inhibitors (PPI's) that blocks secretion of acid. Omeprazole assists by reducing and neutralizing acid in the horse's stomach, which enables improved healing of existing ulcer damage.

The presence of a probiotic helps restore natural intestinal flora, leading to a more rapid recovery and increased nutrient absorption.

Each dose of omeprazole is effective for 24 hours.

Sucralfate is a cytoprotective agent used for the symptomatic treatment of equine gastric ulcer disease. Each dose of sucralfate is effective for 6-8 hours.

When sucralfate is administered in conjunction with omeprazole, the sucralfate will coat the ulcer and reduce the occurrence of further acid damage. Do not mix sucralfate with supplements or medication, administer on its own.*Interactions

EXAMPLE DOSAGE CALCULATOR

Example – Horse weight 1100lb (550kg)

Days	Omeprazole or Omeprazole Plus	Sucralfate
1-21	3 sachets/scoops once-a-day	3 sachets/scoops twice per day= 6 per day
22-30	3 sachets/scoops once-a-day	2 sachets/scoops twice per day= 4 per day

Bundle can be customized based on your horse's weight.

- 725 - 950lb (330- 430kg)
- 960 - 1250lb (440- 570kg)
- 1275 - 1720lb (580- 780kg)

Refer to website: <https://abler.com/dosage-calculator>

HOW MANY DO I NEED?

Omeprazole (in conjunction with sucralfate)
 Days 1 to 30 ONE sachet or scoop of omeprazole per 175kg (365lbs) administered as a single dose per day for 30 days
 Prevention: as required

Sucralfate (in conjunction with omeprazole)
Days 1 to 21: ONE sachet or scoop of sucralfate per 165kg(365lbs), administered as a single dose either three times (ideal) or twice per day for 21 days.

Days 22 to 30 : ONE sachet or scoop of sucralfate per 330kg (990lbs), administered as a single dose either three times (ideal) or twice per day for 7 days. *Prevention ongoing as required

COMPOSITION

Sucralfate: Each sachet or scoop of film-coated granules contains 5.0g of sucralfate BP.

Treatment dosage of 30mg/kg (13mg/lb) of horse's bodyweight.

Omeprazole: Each 2.8g sachet or scoop of enteric-coated granules contains 700mg Omeprazole BP

Omeprazole Plus: Each 4.2g sachet or scoop of enteric-coated granules contains 700mg Omeprazole BP, 21 Billion cfu probiotic B. coagulans (lactobacillus sporogenes)

Treatment dosage of 4.0mg/kg (1.8mg/lb) of horse's bodyweight.
 Prevention dosage of 2.0mg/kg (0.9mg/lb) of horse's bodyweight.

FEEDING TIPS

Sucralfate is most effective when administered:

- Morning when the stomach is less likely to be full.
- Due to interactions administer at least 30 minutes prior to omeprazole and any other medications and supplements.
- Administer twice-a-day (AM and PM)

Feeding Tips

- Sprinkle onto a small feed (i.e a few handfuls of moistened chaff)
- Mix with water and administer via oral syringe
- Mix into a paste and smear onto apples or carrots

Important

- If a sucralfate dose is missed and the next planned dose is within a few hours, wait and administer as per the normal schedule.
- Do not double-dose.

Omeprazole or Omeprazole Plus granules:

Administer once a day

FEEDING TIPS

- Mix with apple sauce, oil or spread on a treat.
- Top dress to dry or damp feed.

DO NOT expose omeprazole products to water or the enteric coating and buffering agent (added to aid effectiveness), will be damaged.

(Sucralfate)

OVERDOSAGE

Omeprazole + Omeprazole Plus

Massive overdosage is required to cause problems in other species but the toxic dosage in horses is uncertain. Rats have tolerated oral doses no greater than 40mg/kg (this would be equivalent to ten times of 100% product fed to a horse at one time).

INTERACTIONS / CONTRAINDICATIONS

Omeprazole and Omeprazole Plus appears to be a safe drug with low associated problems. It is contraindicated in horses hypersensitive to it. Omeprazole may decrease the hepatic clearance of some medications. Omeprazole's safety during pregnancy has not been established.

Sucralfate can decrease the absorption of many drugs, including omeprazole (PPI's), and should not be given within a minimum of 30minutes from other oral medications.

SIDE EFFECTS

Omeprazole + Omeprazole Plus, like other PPI's, is well tolerated. Nervousness, abnormal heartbeat, muscle pain, weakness, leg cramps and water retention occur infrequently.

Sucralfate is not absorbed systematically, adverse effects have not been reported.

TOXICITY

Omeprazole + Omeprazole Plus appears to be very well tolerated in horses. There may be a possibility of Gastro Intestinal (GI) distress (anorexia, colic, flatulence, diarrhea).

Sucralfate appears to be very well tolerated in horses.

WARNINGS

Omeprazole + Omeprazole Plus and Sucralfate

Do not treat horses intended for human consumption, keep out of reach of children.

Veterinary use only

STORAGE

Omeprazole + Omeprazole Plus and Sucralfate

Store in a cool dry atmosphere away from extreme heat. Store or transport at 20° to 30°C (68° to 86°F).
